

BRAG - Example Document / Beispiel-Dokument

This short example lets you test BRAG right away. Drag it into your project folder, wait for the first indexing to finish, then ask the questions shown on the BRAG setup screen.

BRAG began as a research assistant for a doctoral (PhD) project. It indexes your documents on your own computer and answers with page-precise citations, so every answer links back to the exact page of the original document.

(Dieses Beispiel-Dokument dient nur zum Ausprobieren - du kannst es spaeter loeschen.)

Key facts about BRAG

BRAG builds its meaning index locally with the Snowflake Arctic embedding model (arctic-embed version 2), which produces 1024-dimensional vectors. Search results are re-ranked by the bge-reranker-v2-m3 model. Documents are split into chunks of about 2000 characters with 200 characters of overlap.

Supported document types:

PDF - .pdf Word - .docx PowerPoint - .pptx
Markdown - .md HTML - .html

This page (page 2) intentionally states that BRAG's local embedding model is Snowflake Arctic, so you can verify that the citation link opens the PDF on the correct page.
